

Information Security Policy

- ✓ Our Policy reflects our commitment to implement high quality and security in everything we do.
- ✓ We established a firm but dynamic Management System that complies with the requirements of global standards. We are fully certified in standards of ISO-9001 and ISO 27001 which enable us to consistently improve our efficiency and our awareness. Our QMS outlines the structure, responsibilities, and procedures aimed at satisfying or exceeding customer and regulatory requirements and consistently delivering exceptional value.
- ✓ Our primary goal in implementing the Quality and Information security management system is to consistently strive to deliver high-quality, secure and reliable products, services and solutions the first time, every time and on time - as promised.
- ✓ Our quality and information security management system calls for the designation of annual targets that should be made clear to and followed through by each staff member. Targets are aimed at reducing errors, and inefficiency, reducing response time, and improving overall customer service and satisfaction.
- ✓ We believe that the active implementation of our policy by our personnel is vital. We have adopted the following approach in supporting them: create a work environment that encourages and continually endeavors to improve our people, processes, products, and facilities and to be mindful of quality, security, and safety issues in everything we do.
